Problem 1 *The radius of a circle is increasing at a rate of 2 inches per minute.*

- (a) *At what rate is the circumference of the circle changing when the radius is 10 inches?*
 - (b) *At what rate is the area of the circle changing when the radius is 12 inches?*
-

Problem 2 A right cone has a fixed slant height (see figure below) of 9 ft. The cone's height is shrinking at a rate of 0.5 ft/sec. At what rate is the **volume** of the cone changing when the height is 6 ft? Be sure to label the picture.

Problem 3 A part of a circle centered at the origin with radius $r = 7$ cm is given in the figure (A) below. A right triangle is formed in the first quadrant (see Figure (A)). One of its sides lies on the x -axis. Its hypotenuse runs from the origin to a point on the circle. The hypotenuse makes an angle θ with the x -axis. Assume that the angle θ changes at the rate $\frac{d\theta}{dt} = 0.2$ radians per second.

(a) Label Figure A.

(b) In Figure B, draw the triangle twice; once when θ is small and once more, when θ is close to $\frac{\pi}{2}$.

(c) Find the rate of change of the height of the triangle when $\theta = \frac{\pi}{3}$

(d) Find the rate of change of the area of the triangle when $\theta = \frac{\pi}{3}$

Problem 4 A rectangle in the first quadrant is constructed by taking a point (x, y) on the graph of the function $f(x) = 9 - x^2$, drawing a line segment vertically downward to the x -axis and a line segment horizontally leftward to the y -axis, as in the picture below. Denote the **length of the base** (along the x -axis) of the rectangle by x , the **height of the rectangle** (along the y -axis) by y (in meters), and the **PERIMETER** of the rectangle by P . When $x = 2$ m (and only at that moment), the height y is shrinking at a rate of $\frac{1}{5}$ m/s. Find the value of $\left[\frac{dP}{dt}\right]_{x=2m}$ **by performing the steps below.**

- (a) **Find a formula** for the height, y , of the rectangle as a function of x . (This is denoted as $y(x)$.)
- (b) **Find the value** of $\left[\frac{dx}{dt}\right]_{x=2m}$.
- (c) **Find a formula** for the perimeter, P , of the rectangle as a function of x . (This is denoted as $P(x)$.)
- (d) **Find the value** of $\left[\frac{dP}{dt}\right]_{x=2m}$.
- (e) **Write a sentence to explain** what the value found in ((d)) means about the rectangle. (Don't forget UNITS.)

Problem 5 Find the mistake in the solution to the given problem. Then solve the problem correctly.

Two boats leave from the same dock, but at slightly different times. One boat is traveling east at 30mph while the other boat is traveling north at 15mph. At an instant in time when the boat traveling east is 15 miles from the dock and the boat traveling north is 10 miles away from the dock, at what rate is the distance between the boats changing?

• We want to find $\frac{dz}{dt}$ so
 $x^2 + y^2 = z^2$
 • We know $x=15, y=10,$
 $\frac{dx}{dt}=30, \frac{dy}{dt}=15$
 • Substituting $x=15$ and $y=10$:
 $15^2 + 10^2 = z^2$ or $325 = z^2$
 • Take the derivative:
 $0 = 2z \frac{dz}{dt}$
 • So $\frac{dz}{dt} = 0$

Problem 6 A plane flying horizontally at an altitude of 2000 m and a speed of 200 m/sec passes directly over a radar station. (See figure below.) Find the rate at which the distance from the plane to the station is increasing 5 seconds after the plane passed directly over the radar station. Make sure to label the figure.

Problem 7 A plane flying horizontally at an altitude of 800m and speed of 200 m/sec passes directly over a spectator at an air show. (See figure below.) Find the rate at which the angle of elevation, θ , is changing 4 seconds later. Make sure to label the figure. (θ = angle between the ground and the line from the spectator to the plane)

Problem 8 A cylindrical swimming pool with a radius of 10 feet and height of 5 feet is being filled with water. How fast is the water being pumped into the pool (in ft^3/min) if the water level is increasing at a rate of 6 in/minute? Make sure to draw a picture to represent the situation.

Problem 9 A conical water tank of height 10 feet and radius 4 feet is being drained through a hole in the bottom (See figure below).

- Let r be the radius of the water at depth h . In the figure above, label r and h .
- Find an expression for r in terms of h .
- The water in the tank is being drained at a rate of 2 ft^3 per minute. What is the rate of change of the water depth when the water depth is 3 feet?
