

Problem 8

Problem 8

Problem 1 Sketch a possible graph of a function f that has the following properties:

- (a) f is defined on the interval $(0, 6)$.
- (b) f has no local maximums.
- (c) f has exactly two local minimums.

Explanation. This could be the graph of f . Notice two local minimums: at $x = 2$ and at $x = 4$.
