

Problem 1

Problem 1

Problem 1 Without using a graphing utility, match each graph of functions in A-F with the algebraic representation of functions in a-f:

Problem 1

(a) The function f defined by $f(x) = \frac{x}{x^2 + 1}$.

(b) The function g defined by $g(x) = \frac{x}{x^2 - 1}$.

(c) The function h defined by $h(x) = \frac{1}{x^2 - 1}$.

(d) The function a defined by $a(x) = \frac{x}{(x - 1)^2}$.

(e) The function s defined by $s(x) = \frac{1}{(x - 1)^2}$.

(f) The function r defined by $r(x) = \frac{x}{x + 1}$.
