

Problem 4

Problem 4

Problem 1 Suppose the line tangent to the graph of f at $x = 1$ is $y = 6x - 7$. Find an equation of the line tangent to the following curves at $x = 1$:

(a) $y = g(x) = 5(f(x))^4$

(b) $y = h(x) = x^2(f(x^3))$
