

Problem 6

Problem 6

Problem 1 Use the graph of g

(a) Find the values of t in $(0, 4)$ at which g is not continuous.

Explanation. g is not continuous at $t = 1$.

(b) Find the values of t in $(0, 4)$ at which g is not differentiable.

Explanation. g is not differentiable at $t = 1$, because g is not continuous there, and at $t = 2$, because g has a "cusp" there.
