

Problem 4

Problem 4

Problem 1 For each of the curves given by the following equations, find a formula for the slope of the tangent line at a point (x, y) .

(a) $e^{x^2y^3} - 5x + 7y = 36$

(b) $7 = 22 \tan(y) + \frac{4}{x} - \frac{7}{y}$

(c) $\cos(xy) - x^3 = 5y^3$
