

Problem 1

Problem 1

Problem 1 (a) Write as an exponential with base 5. 7^{3x} .

(b) Write in terms of the natural logarithm. $\log_3(4)$.

(c) Expand the following: $\log_{1/2} \left(\frac{6x^5(2 + \tan(x))^x}{\sqrt[5]{e^{4x} + 1}} \right)$.
