

Problem 1

Problem 1

Problem 1 The graph of $g(x) = e^x$ is given below.

- (a) Find the domain and range of g .

Explanation. Domain: $(-\infty, \infty)$, Range: $(0, \infty)$

- (b) Find the values of $g(1)$, $g(0)$, $g(-1)$ and plot the points $(1, g(1))$, $(0, g(0))$, and $(-1, g(-1))$ on the graph of $g(x) = e^x$.

Explanation. $g(1) = e^1 = e$, $g(0) = e^0 = 1$, and $g(-1) = e^{-1} = \frac{1}{e}$. These are standard values of the famous function $g(x) = e^x$ that you should know.

Problem 1

(c) Graph $h(x) = \ln(x)$ on the same axis as $g(x) = e^x$.

Explanation. Recall: $\ln(x)$ is the inverse of e^x . To find the graph of $\ln(x)$ we reflect the graph of e^x over the line $y = x$. Since the points $\left(-1, \frac{1}{e}\right)$, $(0, 1)$, $(1, e)$ are on $y = e^x = g(x)$, the points $\left(\frac{1}{e}, -1\right)$, $(1, 0)$, $(e, 1)$ are on the graph of $y = \ln(x) = g^{-1}(x) = h(x)$

Problem 1

- (d) Find the domain and range of h .

Explanation. The domain of $h(x) = \ln(x)$ is $(0, \infty)$. The range is $(-\infty, \infty)$.

- (e) Find the values of $h(1), h(0), h(-1), h(e), h\left(\frac{1}{e}\right)$, or say x not in the domain.

Explanation. $h(1) = \ln(1) = 0$, $h(0)$ is not defined because 0 is not in the domain of $\ln(x)$. $h(-1)$ is not defined because -1 is not in the domain of $\ln(x)$. $h(e) = \ln(e) = 1$, and $h\left(\frac{1}{e}\right) = \ln\left(\frac{1}{e}\right) = \ln(e^{-1}) = -1 \ln(e) = -1$. These are standard values of the famous function $h(x) = \ln(x)$ that you should know.
