

Problem 5

Problem 5

Problem 1 Consider a square with a side x . Let A be the area of the square.

- (a) Compute ΔA , the change in area if the side increases by $\Delta x = dx$.
- (b) Compute dA , the differential of A at x , and compare it to ΔA .
- (c) In the figure below the shaded part represents the change ΔA . Shade the part that represents dA .
